

Thomson-Reuters Corporation eClassroom

A major gift from The Thomson-Reuters Corporation, headquartered in Stamford, CT has enabled the University Libraries to install its first wireless electronic classroom and the first application of wireless technology on the Stamford campus. Dedicated on November 2, 2001, The Thomson-Reuters eClassroom includes dual LCD projectors, VHS and DVD players, access to all of the University's networked databases and the Internet. In the Spring 2002, the library had been able to loan laptops to faculty for use in classrooms and to student for use in study rooms and other areas of the library.
